ACKNOWLEDGEMENTS

This document with the projection results was prepared by a team consisting of M.V. George, J. Perreault, R. Costa, D. Larrivée and B. Ram. Overall direction for the development of the projections and presentation of the results was provided by M.V. George, and J. Perreault. Computer programming was done by V. Kawka and research support was provided by L. Dell'Oso and S. Paulin. Text processing was performed by D. St-Germain and A. Miles.

REMERCIEMENTS

Ce document ainsi que les projections qu'il contient est le résultat d'un travail de collaboration. L'équipe de projection était formée de M.V. George, J. Perreault, R. Costa, D. Larrivée et B. Ram. La direction générale a été assumée par M.V. George et J. Perreault. V. Kawka était responsable de la programmation; L. Dell'Oso et S. Paulin ont collaboré à titre d'assistante de recherche. Le traitement de texte a été effectué par D. St-Germain et A. Miles.

INTRODUCTION

The previous set of Statistics Canada household and family projections for Canada, provinces and territories was published in December 1981 (Catalogue 91-522). A revised set of projections is presented here, covering a period up to 2006, which supersedes the previous series. These projections are based on the latest population projections (Catalogue 91-520, 1985), the census data series relating to households, families and marital status distributions, 1966 to 1981, and take into account the recent social and demographic trends, in the country. The universe refers to private households only, excluding collective households. In view of the impending release of the 1986 Census data relating to households and families by type and characteristics, which were not available for the present revision, and in order to satisfy the demand by several users, these projections are being released as <u>interim</u> household and family projections. When the 1986 Census data become available later this year, these projections will be reviewed, updated and published.

These projections, of course, are not predictions. They reflect the future growth and composition of households and families under stated assumptions, which incorporate varying degrees of uncertainty in future changes of population by age, sex, marital status composition and household and family formation. Because of these uncertainties, three alternative series of projections (Series A, B and C) are presented, encompassing a plausible range of variations in the factors affecting the growth and structure of households and families.

INTRODUCTION

Les dernières projections des ménages et des familles de Statistique Canada étaient publiées en décembre 1981 (Catalogue 91-522). Ces projections ont depuis été révisées afin de prendre en compte les changements sociaux et démographiques importants observés ces dernières années au Canada. On trouvera ici les projections révisées des ménages et des familles pour la période allant jusqu'à 2006. La population adulte est tirée des plus récentes projections de Statistique Canada (Catalogue 91-520, 1985) et les données relatives aux ménages, aux familles et aux répartitions par état matrimonial proviennent des recensements canadiens de 1966 à 1981. Seul l'univers des ménages privés est pris en compte ici et exclu donc les ménages collectifs. Il importe de souligner que les résultats publiés ici le sont à titre <u>provisoire</u>. Cette décision a été prise pour les raisons suivantes. D'une part, les chiffres du recensement de 1986 seront publiés sous peu; d'autre part, il fallait répondre, sans plus tarder, aux demandes croissantes des utilisateurs. Dès que paraîtront les résultats du recensement de 1986, ces projections seront révisées, mises à jour et publiées.

Une projection n'est pas une prédiction; elle vise plutôt à illustrer divers scénarios d'avenir en fonction d'hypothèses explicites, hypothèses comportant à des degrés divers une marge d'incertitude quant à l'évolution démographique et à la formation des ménages et des familles. Afin de rendre compte de cette incertitude, trois projections sont offertes (séries A, B et C), susceptibles de couvrir l'éventail des variations plausibles des facteurs de croissance des ménages et des familles.

Selected highlights of the projection results; definitions of terms used; and a brief description of the methodology and assumptions are followed by projection results for the three selected series.

On trouvera dans ce document, outre les résultats de la projection, les principaux faits saillants, la définition des termes employés et une brève présentation de la méthode et des hypothèses.

HIGHLIGHTS

The household and family projections presented here portray the future growth of households and families to the year 2006 in three series: A, B and C. These represent the low, middle and high growth scenarios, for Canada and the provinces. The three series are shown with their underlying assumptions in Table A.

* **Increase in the number of households...**

  By 2006, the number of households in Canada is expected to reach between 11.3 and 12.6 million (up 3.1 to 4.3 million), a 37% to 52% increase from 1981. Household growth will continue to outpace population growth.

* **Increase in the number of families ...**

  The number of families may exceed 8.5 million in 2006. This implies a growth of more than 37% over the 1981-2006 period. There were 6.3 million families in 1981.

* **Decreasing household size ...**

  The decline in the average number of persons per household will continue, from 2.9 in 1981 to 2.5 in 2006, based on Series A (2.2 in Series C). This is mostly due to declining fertility coupled with an increasing proportion of people living alone.

FAITS SAILLANTS

L'évolution probable du nombre de ménages et de familles au Canada et dans les provinces au cours des deux prochaines décennies, est illustrée brièvement ci-dessous. Trois scénarios, susceptibles de circonscrire divers rythmes de croissance plausibles, faible, modérée ou rapide, ont été retenus. Ces scénarios, identifiés par les lettres A, B et C, et leurs hypothèses sous-jacentes, sont présentés au tableau A.

* **Accroissement du nombre de ménages...**

  En 2006, le Canada pourrait compter entre 11.3 et 12.6 millions de ménages, un accroissement de 3.1 à 4.3 millions depuis 1981. Ce rythme d'accroissement, de l'ordre de 37% à 52%, est de beaucoup supérieur à celui prévu pour l'ensemble de la population canadienne.

* **Accroissement du nombre de familles...**

  Le nombre de familles pourrait bien dépasser les 8 millions et demi en 2006, une croissance de plus de 37% entre 1981 et 2006. Le nombre de familles en 1981, était de 6.3 millions.

* **Réduction de la taille des ménages...**

  La réduction de la taille moyenne des ménages est appelée à se poursuivre. On comptait 2.9 personnes par ménage en 1981. Selon la série A, cette moyenne se situerait à 2.5 en 2006 (ou 2.2 selon la série C). La baisse prolongée de la fécondité de même que l'augmentation du nombre des ménages formés de personnes seules, expliquent en grande partie la réduction de la taille des ménages.

* **Rapid growth of non-family households ...**

Non-family households, comprised mostly of persons living alone, could double over the 1981-2006 period, from 2.1 million to 4 million, according to Series C (2.8 million in Series A).

Non-family households may continue to grow faster than family households. By 2006 they could represent as much as 34% of all households as per Series C, up from 26% in 1981.

Almost three-quarters of households in 1981 were family-type. By 2006 such households may account for only 66% of all households, according to Series A.

* **Growth of lone-parent families outpaces that of husband-wife families ...**

The number of husband-wife families, the predominant category, could increase, from 5.6 million in 1981 to some 7.3 to 7.9 million by 2006 (a growth of 31% to 40%). However, such families may decline as a proportion of total families, from 89% in 1981 to 85% by 2006, according to Series C (87% in Series B).

Lone-parent families will continue to grow faster than husband-wife families. From 714 thousand in 1981 they may increase to between 902 thousand and 1.3 million by 2006 a growth of 26% or 86%, in Series A and C, respectively.

* **Croissance rapide des ménages non familiaux...**

Le nombre de ménages non familiaux, constitués pour la plupart de personnes seules, pourrait doubler entre 1981 et 2006, selon la série C, pour atteindre 4 millions. Une croissance plus faible serait observée selon la série A, de l'ordre de 2.8 millions.

Si les ménages non familiaux devaient continuer à augmenter à un rythme plus rapide que les ménages familiaux, tel que prévu dans la série C, ils pourraient regrouper en 2006, jusqu'à 34% de l'ensemble des ménages, comparativement à 26% en 1981.

En 1981, près des trois quarts de l'ensemble des ménages étaient des ménages de type familial. La part relative de ces derniers pourrait continuer de baisser et atteindre 66% en 2006 (série A).

* **Croissance des familles monoparentales plus rapide que celle des familles avec deux conjoints...**

Le nombre de familles époux-épouse, le groupe le plus important, augmentera pour atteindre en 2006 quelque 7.3 à 7.9 millions, une croissance de 31% à 40%. On en comptait 5.6 millions en 1981. On prévoit toutefois que leur part relative (89% en 1981) continuera de baisser pour se situer à 85% ou 87% de l'ensemble des familles en 2006, selon l'hypothèse retenue.

Le nombre de familles monoparentales continuera sans doute d'augmenter plus rapidement que celui des familles époux-épouse. On en dénombrait 714 mille en 1981; leur nombre atteindra 902 mille en 2006, selon la série A; il doublerait pour atteindre 1.3 million selon la série C, une croissance de 26% à 86%, selon l'hypothèse considérée.

* **Baby boomers major contributors to household growth ...**

Between 1981 and 2006, the largest portion of household growth (52%) will be concentrated among the 35-54 age group, those comprising most of the baby boom generations. About one-third (31%) of the projected household growth (Series B) will be observed among the 65 and over age group, while the young householders, those below 35 will see a sizeable decrease in their numbers and their relative proportion.

* **Large regional variations ...**

Large regional variations are expected in household growth rates for the 1981 to 2006 period: 57% in the Maritimes; 38% in Quebec; between 46 and 48% in the other regions (Ontario, Prairies and British Columbia), according to Series B. These trends reflect basically the effects of inter-regional migration.

* **Croissance plus forte au sein des générations du "baby boom"...**

Entre 1981 et 2006, la plus grande part de la croissance des ménages (52%) se retrouvera chez les 35-54 ans, les générations du "baby boom". Près d'un tiers de la croissance prévue (31%) sera observée chez les plus de 65 ans. Par contre, chez les moins de 35 ans, on prévoit une diminution non seulement du nombre de ménages mais aussi de leur part relative.

* **Fortes disparités régionales...**

Le rythme d'accroissement prévu des ménages n'est pas uniforme à travers le pays. La croissance prévue pour la période 1981-2006, selon la série B, serait de 57% dans les Maritimes, 38% au Québec et de l'ordre de 46 à 48% en Ontario, dans les Prairies et en Columbie-Britannique. Ceci reflète essentiellement l'effet de la migration interrégionale.

DEFINITIONS OF TERMS

Dwelling - Dwelling refers to a set of living quarters in which a person or group of persons reside or could reside.

Household - Refers to a person or group of persons (other than foreign residents) who occupy a dwelling and do not have a usual place of residence elsewhere in Canada. It usually consists of a family group with or without lodgers, employees, etc. However, it may consist of two or more families sharing a dwelling, a group of unrelated persons, or one person living alone. Household members who are temporarily absent on Census Day (e.g., temporary residents elsewhere) are considered as part of their usual household. For census purposes, every person is a member of one and only one household.

Private household - A private household refers to a person or group of persons (other than foreign residents) who occupy a private dwelling and do not have a usual place of residence elsewhere in Canada. The number of private households equals the number of occupied private dwellings. In this report and unless otherwise specified, all data on households are for private households only.

Type of private household - Refers to the basic division of private households into family and non-family households.

Household maintainer (formerly head of household) - Refers to the person or one of the persons in the household who pays the rent, or the mortgage, or the taxes, or the electricity, etc., for the dwelling.

Family household - A household comprised of at least one family and in which the maintainer is also

DÉFINITION DES TERMES

Logement - Ensemble de pièces d'habitation qu'une personne ou un groupe de personnes habitent ou pourraient habiter.

Ménage - Personne ou groupe de personnes (autre que des résidents étrangers) occupant un même logement et n'ayant pas de lieu de résidence habituelle ailleurs au Canada. Il se compose ordinairement d'un groupe familial, avec ou sans chambreurs, employés, etc. Il peu aussi se composer de deux familles ou plus partageant le même logement, d'un groupe de personnes non apparentées ou d'une personne seule. Les membres d'un ménage qui sont temporairement absents le jour du recensement (par exemple, résidents temporaires ailleurs) sont considérés comme faisant partie de leur ménage habituel. Pour les fins du recensement, chaque personne est membre d'un seul et unique ménage.

Ménage privé - La ou les personnes (autre que des résidents étrangers) qui occupent un logement privé et qui n'ont pas de lieu de résidence habituelle ailleurs au Canada. Le nombre de ménages privés est égal au nombre de logements privés occupés. Sauf indication contraire, toutes les données sur les ménages présentées dans cet ouvrage se rapportent aux ménages privés uniquement.

Genre de ménage privé - Répartition fondamentale des ménages privés en ménages familiaux et ménages non familiaux.

Soutien de ménage (antérieurement chef de ménage) - La ou une des personnes du ménage qui est responsable du paiement du loyer ou de l'hypothèque, ou des taxes, ou de l'électricité, etc., pour le logement.

Ménage familial - Ménage composé d'au moins une famille et dont le soutien est également la personne repère de la

the reference person for the family unit. Note that family household is defined differently in the census, where it refers to a household that contains at least one census family.

Non-family household - A household comprised of a person living alone, or unrelated persons sharing a dwelling and other units not included in the family household category. Note that non-family household is defined differently in the census, where it refers to a household that does not contain a census family.

Family - Consists of a husband and a wife (with or without children who have never been married, regardless of age) or a lone parent, of any marital status, with one or more children never married, regardless of age, living in the same dwelling. Families in this report refer to those in private households only, that is, excluding families in collective households.

Family reference person (formerly head of family) - Refers to a person in the family (who is either the husband or the wife of a married couple, either partner in a common-law relationship or the parent in a lone-parent family) to whom the relationship of all other family members is recorded.

Husband-wife family - Consists of a husband and a wife (with or without children, regardless of age), or persons who live in a common-law relationship (with or without children, regardless of age).

Lone-parent family - Consists of a parent (regardless of marital status) with one or more children (regardless of age) living in the same dwelling.

famille. Signalons que ce terme est défini différemment au recensement, où il désigne un ménage comprenant au moins une famille de recensement.

Ménage non familial - Ménage composé d'une personne seule ou de personnes non apparentées partageant un même logement et autres unités non comprises dans un ménage familial. Signalons que ce terme est défini différemment au recensement, où il désigne un ménage ne comprenant pas de famille de recensement.

Famille - Époux et épouse (avec ou sans enfants jamais mariés, quel que soit leur âge) ou un parent seul (peu importe son état matrimonial) avec un ou plusieurs enfants jamais mariés (quel que soit leur âge) vivant dans le même logement. Dans cette publication, le terme "famille" désigne exclusivement les familles qui font partie d'un ménage privé et non celles qui vivent dans un ménage collectif.

Personne repère dans la famille (antérieurement chef de famille) - L'un des membres de la famille (qui est soit l'un des conjoints pour un couple marié, soit l'un des partenaires en union libre ou soit le parent, s'il s'agit d'une famille monoparentale) à partir duquel les liens entre les membres de la famille sont établis.

Famille époux-épouse - Époux et épouse (avec ou sans enfants jamais mariés, quel que soit leur âge) ou personnes vivant en union libre (avec ou sans enfants jamais mariés, quel que soit leur âge).

Famille monoparentale - Père ou mère (peu importe son état matrimonial) vivant avec un ou plusieurs enfants (quel que soit leur âge).

METHODOLOGY AND ASSUMPTIONS

Except for the conceptual change from household head to household maintainer, the methodology in the present projections is similar to that used in previous household and family projections (Statistics Canada, Catalogue 91-522, 1981). The method consists essentially of applying extrapolated rates of household maintainers to the projected adult population. Maintainer rate is defined as the number of household maintainers per 100 persons in a given population group. It is calculated for various characteristics such as age, sex and marital status. For the first-time, in 1981, the "household maintainer" replaced the "head of household" concept which was in use previously. The person responsible for making household payments has been identified as the maintainer of the household.[1]

A thorough review was made to examine the impact of this change of concept. The results of this evaluation suggest that overall, little comparability will be lost for preparing the projections.[2]

As above mentioned, the projection method consists essentially of applying the extrapolated maintainer rates to the corresponding projected adult population by marital status, the latter is developed from the most recent Statistics Canada population projections (Catalogue 91-520, 1985). The extrapolation of

1 The 1981 Census was the first to make an explicit reference to the individual who is responsible for the household payments. (Question 7).

2 The category "secondary family" was the most affected by the change of concept. Given the small numbers involved - less than 1% of families - it was decided not to project separately primary and secondary families.

MÉTHODE ET HYPOTHÈSES

L'approche utilisée pour la présente projection des ménages et des familles est semblable à celle employée antérieurement, exception faite du remplacement du concept de chef de ménage par celui de soutien de ménage (Statistique Canada, catalogue 91-522, 1981). La méthode consiste essentiellement à appliquer des taux de soutien de ménage à une population adulte projetée. Les taux se définissent comme étant le nombre de soutiens de ménage pour 100 personnes au sein d'une population donnée. Ils sont calculés pour diverses sous-catégories, soit le sexe, le groupe d'âges et l'état matrimonial. Avant 1981, le "chef de ménage" était le concept employé; ce concept a depuis été remplacé par celui de "soutien de ménage" c'est-à-dire la personne responsable des paiements pour le logement.[1]

L'impact de ce changement de concept introduit au recensement de 1981 a dû être évalué avec soin. Les résultats de cette évaluation indiquent que dans l'ensemble, la continuité historique des données en serait peu affectée.[2]

Comme indiqué précédemment, la méthode consiste à appliquer des taux extrapolés de soutien de ménage à la population adulte répartie par état matrimonial. Cette dernière est tirée des plus récentes projections démographiques de Statistique Canada (Catalogue 91-520, 1985). L'extrapolation des taux est effectuée à l'aide d'une

1 Pour la première fois, au recensement de 1981 une référence explicite est faite à la personne responsable des paiements pour le logement (Question 7).

2 Les familles secondaires étaient davantage affectées par le changement de concept. Étant donné leur faible importance (moins de 1% de l'ensemble des familles), il a été décidé de ne plus projeter séparément les familles principales et secondaires.

maintainer rates and marital status proportions was made using a modified exponential curve[3] on the basis of intercensal changes observed during the past. The implicit assumption is that the changes observed during a past reference period will continue in the future, although at a gradually decreasing rate. The main data series used for the projections came from the quinquennial censuses, from 1966 to 1981.

The production of projections involves the following six basic steps:

(1) projection of population by age and sex (Catalogue 91-520);

(2) extrapolation of the proportions of population 15 years and over by marital status, age and sex;

(3) projection of population by marital status by applying the proportions in (2) to the population projection in (1);

(4) extrapolation of maintainer rates by type (family type and non-family type);

(5) projection of households and families by applying the maintainer rates in (4) to the projected population by marital status in (3); and

(6) evaluation of projection results and selection of a set of projection series for publication.

The projections which cover the 1985 to 2006 period are developed by age, sex, marital status and type of household, for each province and

3 For a general description of the method, see United Nations, 1973, pp. 31-40; Statistics Canada, 1981 (Catalogue 91-522), pp. 23-24. The "modified exponential" avoids the possibility of extrapolating negative values and proportions in excess of 100.0.

formule exponentielle modifiée[3] et est basée sur l'évolution observée dans le passé. Implicitement, il est donc admis que les tendances observées au cours des périodes de référence se poursuivront dans l'avenir, mais à un rythme décroissant. Les données utilisées pour la projection proviennent des recensements quinquennaux de 1966 à 1981.

L'élaboration des projections se résume en six étapes:

(1) projection de la population par âge et sexe (Catalogue 91-520);

(2) extrapolation de la répartition de la population de 15 ans et plus par état matrimonial selon le sexe et le groupe d'âges;

(3) projection de la population par état matrimonial en appliquant les répartitions obtenues en (2) à la population projetée en (1);

(4) extrapolation des taux de soutien de ménage selon le type (familial et non-familial);

(5) projection du nombre de ménages et de familles en appliquant les taux en (4) à la population projetée par état matrimonial en (3); et

(6) évaluation des résultats et sélection des scénarios de projection pour publication.

La projection couvre la période 1985 à 2006 et est effectuée selon le sexe, le groupe d'âges, l'état matrimonial et le type de ménage, pour

3 On trouvera une description de cette méthode dans Nations Unies, 1973, pp. 31-40; Statistique Canada, 1981 (Catalogue 91-522), pp. 23-24. La formule dite "exponentielle modifiée" permet d'éviter l'extrapolation des valeurs négatives ou de proportions supérieures à 100.0.

territory. The results for Canada are obtained by aggregating the projections of the provinces and the territories.

Assumptions and Projection Scenarios

Several series can be derived using data for various intercensal base periods assuming that future change in maintainer rates and marital status proportions will be a function of the corresponding change in rates and proportions observed for the period concerned. Three sets of projected maintainer rates and marital status proportions involving three base periods, (1966-81, 1971-81 and 1976-81) were produced and analyzed. The three sets for each base period were combined with each of the five population projections series (as per Catalogue 91-520, 1985), thus generating a total of 15 possible scenarios (3 x 5 = 15) of projected households and families. Five scenarios were added to these, combining constant maintainer rates and marital status proportions as of 1981 with each series of population projections.

Selection of Projections and Rationale

After carefully evaluating the results of these 20 projections, a subset was selected consisting of a low and high growth scenario. These have been designated as Series A and C which delineate the lower and upper bounds of the future growth of households and families in the country.

The selection of an appropriate projection range taking into consideration the number of spatial units and the projection variables was a complex undertaking. In the present case there are 13 spatial units and two variables, viz., households and families, which include subcategories such as family households versus non-family households and

chaque province et territoire. Les résultats pour le Canada sont obtenus par agrégation des projections des provinces et des territoires.

Hypothèses et scénarios

La prise en compte de diverses périodes de référence pour l'extrapolation des taux donne lieu à plusieurs séries d'hypothèses. Trois scénarios, basés sur les périodes de référence 1966-81, 1971-81 et 1976-81, ont été retenus pour analyse. Ces trois séries de taux extrapolés de soutien de ménage et de répartitions par état matrimonial, combinés avec chacune des cinq projections démographiques (Catalogue 91-520), ont permis d'obtenir un ensemble de 15 scénarios (3 x 5 = 15) susceptible de circonscrire la croissance future des ménages et des familles. Cinq scénarios ont été ajoutés, associant des proportions et taux constants (au niveau de 1981) à chacune des projections de population.

Sélection des projections

Parmi ces vingt scénarios, deux ont été retenus reflétant une option de croissance faible et une de croissance forte. Ces scénarios sont désignés par les lettres A et C. Ils ont été choisis de façon à circonscrire les limites inférieure et supérieure de la croissance future des ménages et des familles au Canada.

La sélection d'un éventail qui se veut plausible parmi un grand nombre de possibilités, et ce, dans un contexte multi-régional, ne fut pas une tâche facile. L'évaluation a porté sur treize unités géographiques, deux variables: ménages et familles, ainsi que leurs sous-catégories: ménages familiaux et non familiaux, familles époux-épouse et monoparentales. Les

husband-wife families versus lone-parent families. The 20 projections under various combination of assumptions on each of these categories were evaluated and a plausible range was selected. The main criteria used in the selection of an A and C series were as follows:

(1) That the two series should provide a reasonable range of total number of households and families (i.e., a low and high options) to reflect the uncertainty of future growth for Canada and for each province/territory.

(2) That they should offer a reasonable range reflecting the uncertainty associated with the future growth of the rapidly growing types of households and families, such as non-family households and lone-parent families, for Canada and each province/territory.

Series A assumes that the period of rapid change in household and family formation may be over, and consequently the maintainer rates in the future will remain constant at the 1981 level. Since Series A is based on constant maintainer rates, it provides not only the lower bound of the projections, but also illustrates the effect of demographic changes alone on future household and family formation. For Canada and most of the provinces, Series A provides the lowest bound.

The fast growth of non-traditional types of households and families with their increasing share of the total number of households and families, in recent years, has complicated the selection of an appropriate range. It is difficult, at this point, to say whether these changes are temporary or permanent. Examination of projected figures based on different periods shows that the projections based on 1976-81 trends

principaux critères de sélection des séries étaient les suivants:

(1) Les séries retenues devaient couvrir un éventail plausible quant au nombre total de ménages, et ce, tant au niveau national que provincial;

(2) Elles devaient également offrir un écart acceptable pour chaque sous-catégorie, tels les ménages non familiaux et les familles monoparentales; ceci, afin de refléter l'incertitude face à la croissance extrêmement rapide, ces dernières années, de ces catégories.

La série A traduit l'hypothèse que la période de transformation rapide du processus de formation des ménages et des familles pourrait être révolue; si tel était le cas, les taux dans l'avenir ne s'éloigneraient pas de ceux estimés pour 1981. Étant établie à partir de taux constants (ceux de 1981), cette série, en plus de décrire un scénario de croissance minimale des ménages et des familles, met en évidence l'effet des changements d'ordre démographique.

La sélection d'un éventail adéquat a été compliquée du fait de la croissance rapide ces dernières années des catégories dites non traditionnelles et de leur poids accru dans le nombre total de ménages et de familles. On ne peut dire actuellement si les changements observés sont d'ordre conjoncturel ou structurel. Notons cependant que l'extrapolation, basée sur la tendance des années récentes, donne un pourcentage plus élevé de ménages non

yield a higher percentage of subcategories such as non-family households and lone-parent families for the future. This projection, based on the extrapolation of the 1976-81 trend in the propensity to form households and families, is presented in Series C. This series provides the upper limit of the projection range, for Canada and most of the provinces.

Because of the generally large range delineated by the lower and upper bounds of the projections (Series A and C), another series was developed (Series B) as a third option. It is a mid-range scenario obtained by applying population projection 1 to a set of maintainer rates and marital status proportions that are intermediate to those of Series A and C. Series B assumes that the increase in the maintainer rates would slow down considerably but would not cease to grow during the projection period. Thus, Series B is the intermediate series for Canada and most of the provinces.

Table A shows the population projections, assumed maintainer rates and marital status proportions underlying the three projection series.

Due to the effect of interprovincial migration, population projections 1 and 2 represent a high and low growth scenario of adult population for most of the provinces, although not necessarily the highest/lowest range. The choice of Population Projections 1 and 2 was considered appropriate, primarily from a provincial perspective. These population projections have contributed to a plausible range of projections of households and families. Since Population Projection 1 is considered the most plausible for the short term, it was chosen as the base for both Series B and C. Thus, the difference in the results from Series B

familiaux et de familles monoparentales. Cette projection, basée sur l'extrapolation des tendances observées entre 1976 et 1981, correspond à la série C. Cette série représente vraisemblablement une option de croissance maximale.

L'écart délimité par les projections A et C étant considérable, une troisième série est offerte (série B). Cette hypothèse moyenne veut refléter une croissance modérée des taux de soutien de ménage et des proportions d'état matrimonial. Les résultats se situent grosso modo, à mi-chemin entre ceux des séries A et C. La population adulte utilisée est celle de la projection 1. Ainsi, la série B constitue un scénario intermédiaire pour le Canada et pour la majorité des provinces.

Le tableau A décrit les hypothèses retenues pour les taux de soutien de ménage, les répartitions par état matrimonial et les projections de population.

Les projections 1 et 2 ont été retenues parce qu'elles offraient, pour la plupart des provinces, des scénarios de croissances faible et forte de la population adulte; les écarts dans les effectifs adultes projetés provenant essentiellement d'hypothèses de migration différentes. Le choix des projections 1 et 2 s'avérait donc approprié dans une perspective régionale puisqu'elles permettaient d'obtenir un écart appréciable dans les effectifs de ménages et de familles projetés. La projection 1 (considérée comme la plus plausible, à court terme tout au moins) fournit les effectifs adultes pour les séries B et C. Les écarts entre les séries B et C proviennent

and C can be attributed to the variations in the assumptions on the propensity to form households and families, for each of these two series.

donc exclusivement d'hypothèses différentes dans le rythme de formation des ménages et des familles.

Table A. Projected Population, Assumed Maintainer Rates and Marital Status Proportions Underlying Projections A, B and C

Tableau A. Projection de population, taux de soutien de ménage et proportions d'état matrimonial retenus pour les projections A, B et C

Projection Series - Série de projection	Assumed rates and proportions - Taux et proportions retenus	Projected population[1] - Population projetée[1]
A	Constant atthe 1981 level - Niveaux de 1981 constants	Projection 2
B	Intermediate between levels for Series A and C - Niveaux intermédiaires entre les séries A et C	Projection 1
C	Extrapolated on the basis of the data for 1976-81 period[2] - Extrapolation de la période 1976-1981[2]	Projection 1

(1) Catalogue 91-520, 1985 - Nº 91-520 au catalogue, 1985.
(2) Extrapolation was done using the "modified exponential" method as described in the text. - Une formule exponentielle modifiée est utilisée pour l'extrapolation.

For the Yukon and the Northwest Territories, the results were evaluated in light of the small numbers involved. When figures deviated significantly from the patterns observed in the larger provinces, adjustments were made so as to reflect the general pattern. Notwithstanding these adjustments, caution should be exercised when interpreting the results for the territories.

Vu les faibles effectifs en présence, les résultats pour le Yukon et les Territoires-du-Nord-Ouest ont dû être ajustés. Lorsque les chiffres s'écartaient trop de la tendance observée dans les provinces, ils étaient ajustés en conséquence. Nonobstant cet ajustement, les chiffres projetés pour les territoires doivent être interprétés avec circonspection.
